

Apps

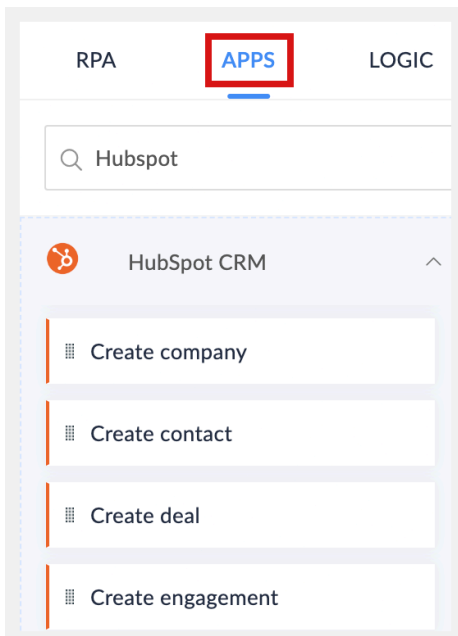

The Apps tab in RPA Flow Builder provides seamless integration with over **800** cloud applications. Simply connect your app account and utilize pre-built actions to streamline your workflows.

App Connections that you create in your Zoho RPA Account are powered by Zoho Flow. Flow is an integration platform that allows you to connect to and exchange data with a wide range of applications. For example, you can connect your Trello account or your team's Gmail account to Zoho Flow, then use them in your Zoho RPA flows.

 **Note:** The **Apps** listed in the RPA flow builder are **powered by Zoho Flow**. You will need an active Zoho flow account subscription in order to use them. The execution limit on your apps will be counted against the available task limit in Zoho flow subscription.

How to Configure Apps:

1. Click on the **Apps** tab in the left side of the builder.
2. Search for the app you want to integrate with, for example, HubSpot CRM.

3. Drag and drop the required action from the list of available tasks.
4. In the configuration window, select the appropriate connection or create a new one if needed.
5. Fill in the required fields for the action using values from previous actions or manual enter them.
6. Click **Done**.
