

## **Remote Script Execution in Zoho Assist**

Zoho Assist allows technicians to access and control a remote computer or server from anywhere. The **Execute script** feature further simplifies this process by enabling the technicians to execute scripts on a remote device effortlessly.

With the **Execute script** feature, technician can easily update, install, or uninstall software applications, automate diagnostic and troubleshooting procedures, manage files, run security checks, and more on the remote desktops and servers.

## **Pre requisites**

**Script File:** Ensure you have the necessary script file readily available on your local device for execution on the remote machine. The script can be in any of the following formats :

- Batch script (.bat )
- PowerShell (.ps/.ps1)
- Shell script (.sh)
- Visual Basic (.vbs)

Steps to execute a script file on a remote device during an active session.

1. Once the session is connected, choose **Execute script** under **Tools** in the left tab.
