## Table

A table consists of Records and Fields that help to organize information within a base. By default, a new base opens in a grid view. You can have multiple tables within a base to save related data.

**For example**, a base for a bug tracker might have separate tables for a list of bugs, developers, and features, while an inventory management base could have products, manufacturers, sales orders, and purchase orders. This way, all the information will be channeled in one organized base, clearly segmented by tables.

🗑 Tables Beta				😑 Content Strategy -			• • 🚯

1	Campaign A	Awareness	• Live	C-Level Executive Marketing Manager Startups C Suite Executive Head of Marketing Head of IT	Software Development Retail Advertising & Marketing	How to create interactive content Designs that compliment your content Choose the right tagline for your content Limited Time Offer	
2	Campaign B	Sales Promotion	Planning	C-Level Executive Marketing Manager Head of Marketing Head of IT	Software Development Finance	It's Winter Sale - Grab the Offer Best ever deal on enterprise license How Zylker Inc enhanced their productivity How pandemic evolved digital marketing	

You can either create a new table from scratch or import an existing file and customize it.

At the top of your base, you will see a Table that says Table 1, which is created by default. You can add more tables by clicking the + icon and renaming it.

Click the + icon (Add a Table) option. Selecting this option will display a context menu with two options.

## Create a table by importing an existing file:

You can import a file to a table in two ways.

- i. **My file** imports a file from your computer.
- ii. **Link (URL)** imports a file from any link.
