

Integrating Zoho Tables with Zoho Flow

Zoho Flow now supports seamless integration with Zoho Tables, enabling users to automate workflows by connecting Zoho Tables with other applications. With both triggers and actions available, you can streamline your processes and reduce manual work.

Key features of the Zoho Tables integration with Zoho Flow

- **Triggers**

- **Base created:** This trigger is initiated when a new base is created in Zoho Tables.
- **Record created:** This trigger is initiated when a new record is added to a table.
- **Record deleted:** This trigger is initiated when an existing record is deleted from a table.
- **Record updated:** This trigger is initiated when an existing record in a table is updated.
- **Table created:** This trigger is initiated when a new table is created in a base.
- **Workspace created:** This trigger is initiated when a new workspace is created in a portal.

- **Actions**
